1. Introduction

The snow leopard (*Panthera uncia*) is one of the world's most elusive and iconic wild cats ranging primarily in the high alpine landscapes of the Himalaya. Despite being widely distributed across 12 countries of Asia, snow leopards persist at very low densities ranging between 1 – 3 individuals per 100 km² within fragmented populations. Snow leopard is rare species which is categorized as vulnerable by International Union for Conservation of Nature (IUCN). Nepal has long been considered as one of the snow leopard's strongholds supporting an estimated 350 – 500 individuals out of 3921 to 6290 global population ranging across roughly 27,500 km². Snow leopards in Nepal are protected by the National Parks and Wildlife Conservation Act (1973). The most recent national conservation strategy seeks to prioritize efforts to conserve them by focusing on three key distinct habitat complexes categorized as the (1) Eastern complex, (2) Central complex and (3) Western complex incorporating 13 protected areas across the northern border of Nepal. In Central Complex, Annapurna Conservation Area and Manaslu Conservation Area are only protected area which are well recognized for conservation of snow leopard and other rare species like musk deer. Nar-Phoo and Neshyang valley in Manang, Upper Mustang and Tsum Numbri valley are best habitat of snow leopard where Bharal and Himalayan Tahr are major prey species. In these Himalayan valleys, wildlife are well preserved through the belief of Buddhism "no harm to human and non-human animals".

While the presence of the snow leopard as an apex predator has important ecological benefits, often the local people that bear the burden of living alongside a large dangerous predator experience much greater costs that, if not properly addressed, may evolve to manifest into actions that directly threaten the long-term persistence of the predator. The conflict with snow leopard is particularly serious because of the threat of mass killing events. Often, when snow leopards enter a corral, it kills all the animals that are present in the corral especially goats and sheep. In the case of Yak, snow leopard rather prefers calves. The most important economic source in remote villages are domestic animals owned by the local villagers. In a poor country like Nepal where the average per capita income is less than \$1000 per year, the loss of any domestic animal is disastrous to the family. At present value, a goat cost roughly USD \$250 and a Yak can cost up to USD \$1200. Thus, it is understandable that most local people, particularly those experiencing direct conflict such as livestock depredation, to retaliate by removing the threat – often using lethal means (worst case) or are indifferent to their survival (best case). Saving yaks is important to create best case scenarios, such as support local livelihood through promoting tourism, livestock insurance, construction of predator proof corral, conservation awareness program. Conservation awareness program is always vital to motivate local people for conservation of wildlife.

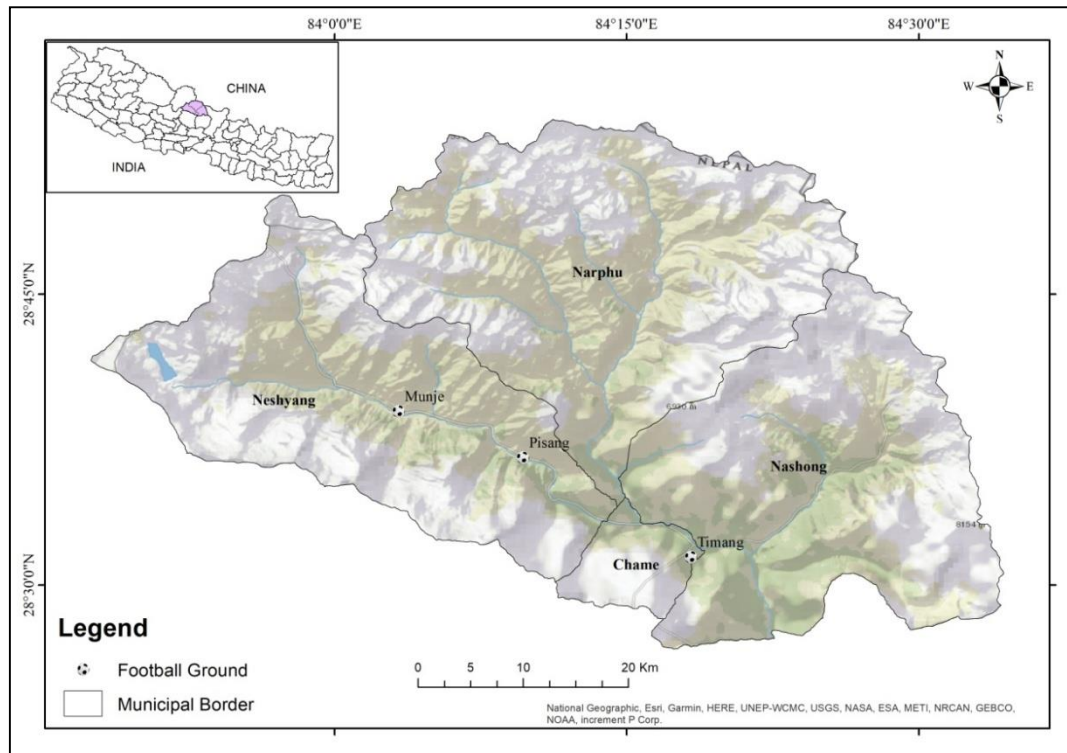

Awareness campaign at school, drama performance, art competition and quiz contest are being well practiced means of awareness program. However, major impacts of these programs are remained within the school, at small locality. To make impact at larger scale nationally and internationally, friendly football match between local youth and celebrity in

Himalaya would be highly effective. Youth play a vital role in society as they represent future generation. Their enthusiasm and willingness can lead to breakthrough in various fields including science, arts, sports and social change. Local youth have intimate experience of living with snow leopard, conservationists/ecologists have the depth ecological knowledge of the species and celebrities can bring the value of species to larger scale at national and international level with their well-known face and help local people to add value on conservation of magnificent snow leopard along with important of saving yaks (from snow leopard and other predators) for local economy.

2. Objectives

1. To respect the contribution of local people for the conservation of snow leopard and husbandry practices at local level.
2. To engage youths and local resident in conservation of snow leopard.
3. To create yak and snow leopard as symbolic species of higher Himalaya
4. To promote tourism in Manang through football played between local youth and Nepalese celebrities.

Program target area: Manang District, Annapurna Conservation Area. Football match was organized in Timang ball ground (2600 m), Pisang Football ground (3100 m) and Munje Football, Manang village (3200 m)

Above figure shows map of manang showing locations of football ground where friendship football match for conservation was conducted and ground photos (below) of Timang, Pisang, and Munje.

3. Program Activities

Program activities were divided into three phase pre-event, event and post-event before executing the program.

A. Pre-event

- ❖ Program logo design, team logo design
- ❖ Creation of Facebook post
- ❖ Post preparation
- ❖ Press release
- ❖ Training and practice in Futsal
- ❖ Jersey and boots preparation
- ❖ Conservation Education Class
- ❖ High Altitude Taught Program
- ❖ Post in Social Media
- ❖ News coverage

B. Event

- ❖ Friendship Football Match in Timang, Pisang and Mungjee in Manang
- ❖ Cultural Program
- ❖ School Visit
- ❖ Snow leopard habitat and landscape observation
- ❖ Post in social media
- ❖ News coverage

C. Post event

- ❖ Distributing Certificates and Granting Token of Love
- ❖ Documentary preparation
- ❖ Photographs
- ❖ News coverage

A. Pre-event

Program logo design, team logo design: Main program logo and team log was designed

Program Logo

Team Kajinsara Yak Logo

Team Pisang Yak Logo

Team Manang Yak Logo

Team Himalayan Snow Leopard Logo

Creation of Facebook page

Press release:

Press release program was conducted in Conference hall of Nepal tourism board where more than 100 participants attended the program.

After press release news was cover in 40+ media some of them are as follows:

1. <https://www.sportsmala.com/public/news/friendship-football-match-will-be-held-in-manang>
2. <https://risingnepaldaily.com/news/31645>
3. <https://www.tourismmail.com/news/detail/102491/>
4. <https://www.tourismmail.com/news/detail/102657/>
5. <https://myrepublica.nagariknetwork.com/news/friendly-football-tournament-kicks-off-at-high-altitude-areas-in-manang/>
6. <https://adstocknepal.com/marketing-news/ant-foundation-biocos-nepal-announces-manang-friendship-match-for-conservation/>

Training and practice in Futsal

All local participants (Manang Yak, Kajinsara Yak and Pisang Yak; ANNEX I-III) practiced in Manang. They organized five friendship matches between clubs to prepare for the “Manang Friendship Match”. Himalayan Snow Leopard team Member (See ANNEX IV) were trained and practiced in Dhuku Futsal, Baluwatar, and Kathmandu.

Conservation Education Class and High Altitude Taught Program

Orientation class was organized in HRA office Naxal Kathmandu where Mr. Gopi Bhusal (CEO of Himalayan Rescue Association) and Dr Paras B. Singh brief about conservation program to the team members of Himalayan Snow leopard.

Posting in Social Media

After press release, each member of Himalayas (18 individuals), staffs of BIOCOS Nepal, Ant Foundation (20) and other various people posted press release in social media specially in Instagram and Facebook.

B. Event

Total 50 peoples including conservationists, naturalists, member of team Himalayan Snow leopard, team of media production, and team of journalists were travelled to Manang on 10 September 2023 and first match was started on 11 September, 2023 in Timang which was followed by the match in Pisang. Eventually match was concluded in Munjee football ground.

Football Match combined with local cultural shows in Timang Football Ground

The match was organized between Himalayan Snow Leopard Team (Annex II) versus Kajisara Yak Team (Annex I). The match was watched by approximately 500 people. All officials of district headquarter of Manang (Chame) were presented in the program.

Football Match in Pisang (2023 September 12)

The match was played between Team Pisang Yak and Team Himalayan Snow Leopard in Pisang Football ground. Officials of ACAP, Manang-Ngisang Rural Municipality and local people approximately 200 were presented in the program

Football Match in Mungjee (September 13, 2023)

The match was played between Team Manang Yak and Team Himalayan Snow Leopard in Pisang Football ground. Officials of ACAP, Manang-Ngisang Rural Municipality and local people approximately 400 were presented in the program

MEDIA COVERAGE

Journalists of Nepal Television, Film Journalist Association Nepal, Nepal Forum of Environmental Journalist, and Nepal Sports Journalist Forum were participated in the program.

Cultural Program

Local youths, women groups and school kids performed local dance in Chame City Hall and in Timangand Mungjee football ground. Most of participants were amazed by the performance. All shows were incredible. During cultural shows BIOCOS NEPAL and ANT FOUNDATION got opportunity to deliver message on conservation

School Visit

To acknowledge performance of kids of Lowphiling School, our team visited school. All kids were excited. Message of conservation follow during school visit.

Snow leopard habitat and landscape observation

Snow leopard habitat was observed from Manang. Actually Manang village is located within the habitat of snow leopard.

How our supporters were promoted in this event?

Total 50 posts were designed to share in social media with the logos of all supports. During Press Release Program, total 20 display board of 7ft x 3 ft and 3 ft x 20 ft were displayed. These boards were transferred all ways to Manang and displayed in each ground.

C. Post-Match/Event activities

a. Distributing Certificate and granting token of Love

Total 120 certificates were printed for the participants and supporters. All certificates and token of love were distributed in each football ground after completion of the program. On the last day of the match (13 September, 2023), appreciation certificates, token of love, certificates for participants were distributed.

Documentary preparation

A documentary of whole trip is under preparation. Photographs and videos will be shared.

5. How integrating youth sports and wildlife creates impactful conservation? - By Dr. Jeffrey Muntifering

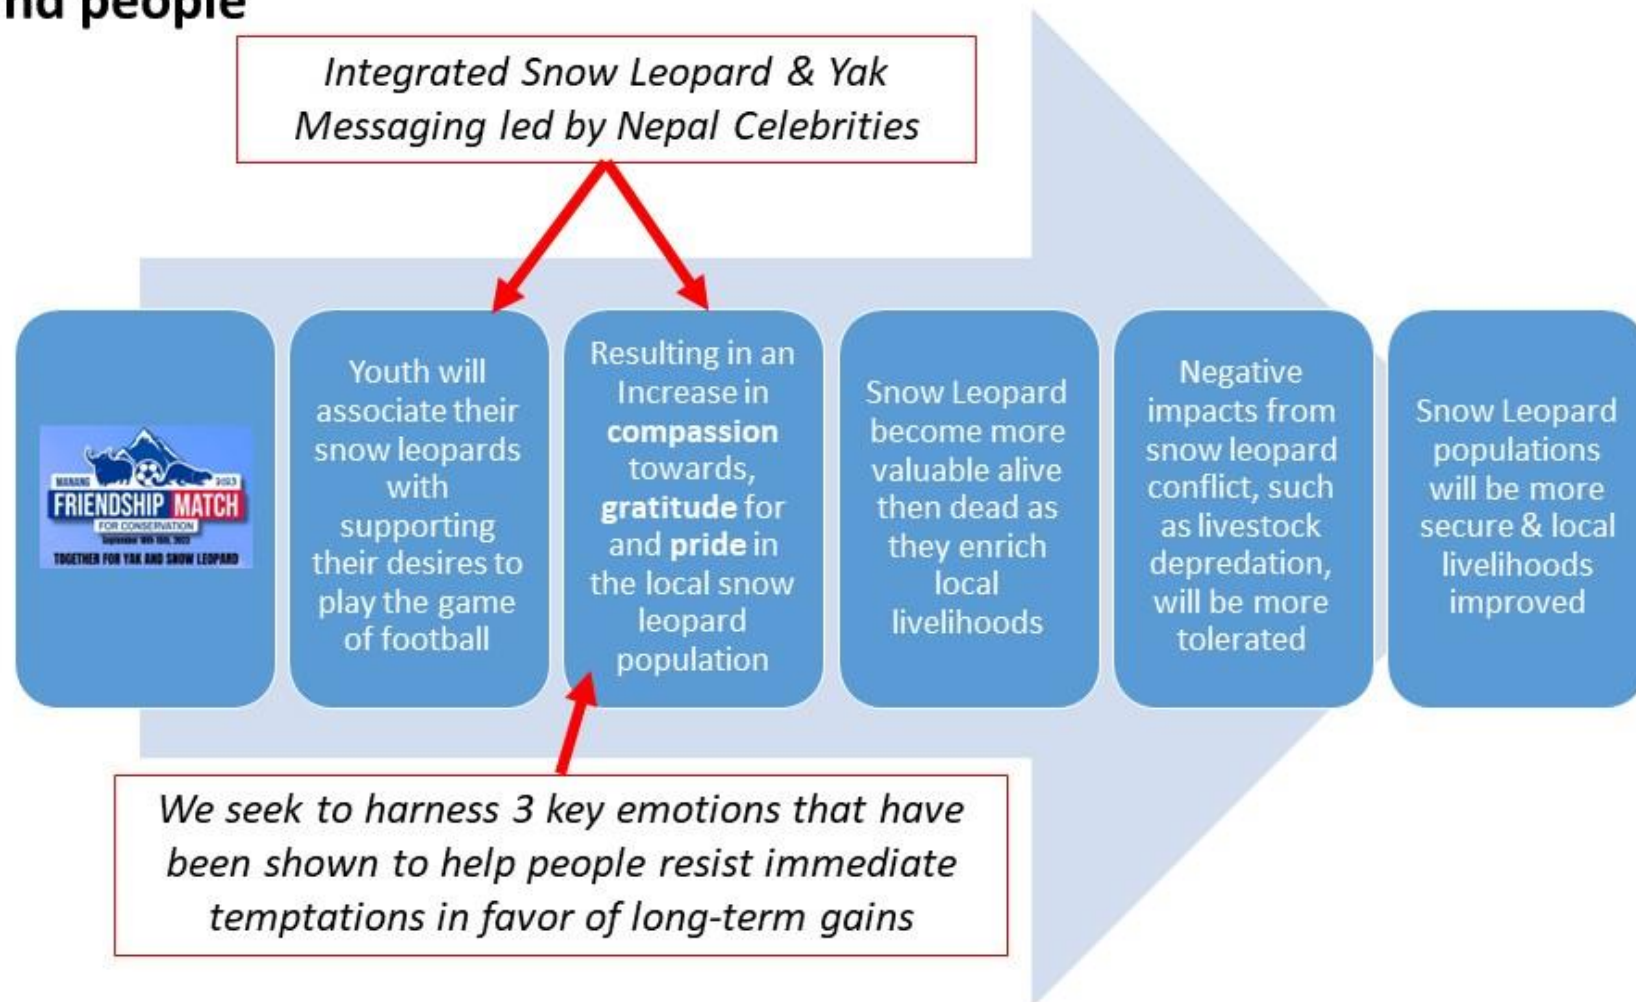

In the Annapurna Conservation Area in north-central Nepal, conservation and social development are inextricably linked as the success of saving wildlife and improving local livelihoods rely upon each other. For centuries, local communities have coexisted with dangerous wildlife including the snow leopard, even when the high-alpine predator would often kill livestock especially yak. When the conservation area was proclaimed, strategies to protect the rare and endangered snow leopard focused on strengthening law enforcement and threats of fines without much consideration of the livestock losses due to snow leopard.

While laws are important to protect endangered wildlife like snow leopards, conservation must also seek strategies that go beyond the conventional policing approach. Especially where the majority of tangible impacts are negative (such as livestock loss), solutions that bring positive benefits to local people and communities are essential to improve the value local people attach to saving snow leopards. Typically, this all-too-common issue is addressed through ‘outreach and awareness’ campaigns that theorize that if the people just knew more about snow leopards and their threats than they would help protect them. While certainly sharing information about snow leopard biology and what they need to survive are important, we believe that harnessing the snow leopard’s currency to create opportunities that provide tangible benefits especially to youth by supporting activities they value will demonstrate that securing a future for snow leopards is also helping enrich lives and livelihoods. We reinforce this by engaging with celebrities in Nepal to help bring this message of hope and coexistence to the communities that bear the bulk of the burden. In essence, we believe that by harnessing three key emotions (pride, gratitude, and compassion) for snow leopard through football we will make significant contributions towards improving the situation for both youth and their snow leopards. In our conservation context, we believe harnessing these emotions will help offset some of the negative feelings and impacts of living with snow leopards and improve the value they attach to saving them. Given the popularity and importance of football in Nepal, it is hard to imagine a more fitting mechanism to connect youth in rural communities with protecting their snow leopards by creating new opportunities to play football that is sponsored by and catalyzed from successful and lasting snow leopard conservation (see our simplified Theory of Change below).

The first friendship match for conservation certainly delivered on this objective. Three separate matches in three different villages ensured that the positive conservation messages carried by the celebrity Himalayan snow leopard team be it from the 16 highly-visible banners and posters at each match, to the awards and recognition given to the local leaders and team members after the matches, to simply the vibrant uniforms adorned by some of Nepal’s most popular celebrities who posed for endless photos with local people, were diffused broadly. It also meant that more local people could become directly engaged in the events whether joining in each welcome ceremony, watching and cheering for the home teams at a match, or attending an evening event with traditional dances, speeches and, in one case, displaying dozens of heartfelt drawings and messages of hope to snow leopards from the local school children. Given the sheer number of individuals involved, it was hard to

imagine anyone not somehow being exposed and inspired by the energy and enthusiasm – brought to Manang from their Snow Leopards.

Our simple Theory of Change for how we believe football can help create positive and lasting outcomes for both snow leopards and people
